PROFESSIONAL SUMMARY

Full stack programmer with proven experience in .NET, Cloud Engineering, and artificial intelligence, specializing in building bespoke web applications and augmented AI. Demonstrated success in navigating enterprise environments, production-ready development projects, optimizing system performance, advocating for user stories and accessible user experiences, and collaborating with team members to achieve project milestones. Skilled in translating complex technical challenges into solutions.

EDUCATION

Clark University

Bachelor's in Game Programming

Worcester, MA

Aug. 2020 – May 2024

EXPERIENCE

Collette

Software Engineer I

Hybrid (Providence, RI)

June 2025 – Present

Maintained full-stack ASP.NET application (monolith) interfacing with internal and external APIs.

Offered technical expertise related to artificial intelligence and its applications on our cross-department 'AI Champions' committee.

Developed and grew ASP.NET microservices being sharded off of the monolith.

Accu-Assembly Inc.

Software Engineer (Contract)

Hybrid (Providence, RI / N. Reading, MA)

September 2024 – June 2025

Developed full-stack Blazor Server applications interfacing with robotic and IoT devices from start to install at customer locations

Designed and trained custom computer vision models for object classification and segmentation, achieving >95% accuracy

Wrote and implemented a versatile plugin system to extend products for alternate customer needs across multiple user stories.

KC Embers

Game Programmer (Volunteer)

Barrington, NH

January 2024 – September 2024

Engineered backend components for core gameplay systems, enhancing overall game performance

Refactored existing code to implement advanced object-oriented programming principles, improving scalability and maintainability

Clark University

Teaching Assistant, Computer Programming C++ (Volunteer)

Worcester, MA

August 2023 – May 2024

Facilitated student learning by delivering clear, concise explanations of complex programming concepts

Provided comprehensive code debugging support in classroom, office hour, and tutoring environments

PROJECTS

Reservations Monolith Application | C#, ASP.NET, T-SQL, VB.NET

Supported an enterprise internal-use web app / desktop app / API monolith using ASP.NET

Participated in the development of C# microservices being sharded off of the monolith as part of the strangler fig pattern.

AccuCart Inventory Management System | C#, Blazor, T-SQL/LINQ | Users include IPG Photonics and SpaceX

Developed an enterprise-ready internal-use data-interfacing web application using Blazor

Facilitates non-technical user access to sophisticated digital-twin inventory system for microcomponents prior to mounting

Implemented secure data access and manipulation using EF Core and ODBC to enable robust two-way IoT communication

Component Detection ML System | PyTorch, Computer Vision, Python, Mask R-CNN

Developed an instance segmentation system using PyTorch Mask R-CNN transfer learning to detect and classify microcomponents

Implemented custom dataset handling, data augmentation pipeline, and semi-automatic annotation tools

Trained 2 employees on the data annotation process and basic training steps to further refine models

Flask Website | Linux, Nginx, MariaDB, Flask, React (TS), Golang, AWS EC2, Docker

LEMP web application featuring Retrieval-Augmented Generation (RAG) Large Language Models, voice-recognition Go microservices, and a comprehensive data-backed user authentication system.

Zenatria | Unity, C#, Git

Designed and developed Tower Defense game demo showcased at PAX East

TECHNICAL SKILLS

Languages: C#, Python, TypeScript, C++, VB.NET

Databases & Data Tools: SQL, Relational Database Design, EntityFramework, SSMS, DataGrip, Tableau, Lowdb (JSON)

Frameworks & Libraries: .NET 8.0 & 10, React, Flask, Blazor, Redux, torch & torchvision, jQuery, openai, opencv, mysql, llama_index, jupyter, pandas, Bootstrap, Vostk, Express

Developer Tools: Git, Visual Studio, Cursor, GitHub Copilot, Jira / Atlassian Ecosystem, Unity, Cloudflare, Sentry, Trello, CVAT, Inno Setup, Jenkins, GitHub Actions

Cloud/Remote Platforms: AWS / Amazon Web Services (EC2, EBS, Lightsail, S3), Google Cloud Run, Docker (Compose), WSL2

Soft Skills: Prompt Engineering, Agile, Scrum, CI/CD, Live Service development & debugging, Waterfall, Customer interaction

Architectural Styles: Monolithic, Microservices
