PROFESSIONAL SUMMARY

Full stack programmer specializing in building augmented AI and bespoke web applications. Demonstrated success in navigating enterprise environments, production-ready development projects, optimizing system performance, and collaborating with team members to achieve project milestones. Skilled in translating complex technical challenges into solutions.

EDUCATION

Clark University

Bachelor's in Game Programming

Worcester, MA

Aug. 2020 – May 2024

EXPERIENCE

Collette

Software Engineer I

Pawtucket, RI

June 2025 – Present

Maintained full-stack ASP.NET application (monolith) interfacing with internal and external APIs.

Offered technical expertise related to artificial intelligence and its applications on our cross-department 'AI Champions' committee.

Developed and grew ASP.NET microservices being sharded off of the monolith.

Accu-Assembly Inc.

Software Engineer (Contract)

North Reading, MA

September 2024 – June 2025

Developed full-stack Blazor Server applications interfacing with robotic and IoT devices from start to install at customer locations

Designed and trained custom computer vision models for object classification and segmentation, achieving >95% accuracy

Wrote and implemented a versatile plugin system to extend products for alternate customer needs across multiple user stories.

KC Embers

Game Programmer (Volunteer)

Barrington, NH

January 2024 – September 2024

Engineered backend components for core gameplay systems, enhancing overall game performance

Refactored existing code to implement advanced object-oriented programming principles, improving scalability and maintainability

PROJECTS

villAlge | **Python, LangGraph, Agents**

Created a harness for agents to roleplay as medieval villagers trying to become chief, with tool calls crafted to interact with each other and the world, and containerized deployment with sidecar locally hosted LangFuse for metrics

Designed for robustness, the system features guardrails around the LLMs and retries when invalid output is produced

Reservations Monolith Application | **C#, ASP.NET, T-SQL, VB.NET**

Supported an enterprise internal-use web app / desktop app / API monolith using ASP.NET

Participated in the development of C# microservices being sharded off of the monolith as part of the strangler fig pattern

AccuCart Inventory Management System | **C#, Blazor, T-SQL/LINQ** | **Users include IPG Photonics and SpaceX**

Developed an enterprise-ready internal-use data-interfacing web application using Blazor

Facilitates non-technical user access to sophisticated digital-twin inventory system for microcomponents prior to mounting, with secure data access and manipulation using EF Core and ODBC to enable robust two-way IoT communication

Component Detection ML System | **PyTorch, Computer Vision, Python, Mask R-CNN**

Developed an instance segmentation system using PyTorch Mask R-CNN transfer learning to detect and classify microcomponents

Implemented custom dataset handling, data augmentation pipeline, and semi-automatic annotation tools

Trained 2 employees on the data annotation process and basic training steps to further refine models

Flask Website | **Linux, Nginx, MariaDB, Flask, React, AWS EC2, Docker**

LEMP web application featuring Retrieval-Augmented Generation (RAG) Large Language Models, voice-recognition microservices, and a data-backed user authentication system.

TECHNICAL SKILLS

AI Skills: Agent Development, Prompt Engineering, Cursor, GitHub Copilot

Languages: C#, Python, TypeScript, C++, VB.NET

Databases & Data Tools: SQL, Relational Database Design, EntityFramework, SSMS, DataGrip, Tableau

Frameworks & Libraries: .NET, React, Flask, Blazor, torch & torchvision, jQuery, openai, opencv, llama_index, jupyter, pandas

Developer Tools: Git, Jira, Unity, Cloudflare, Sentry, CVAT, Inno Setup, Jenkins, GitHub Actions

Cloud/Remote Platforms: AWS / Amazon Web Services (EC2, EBS, Lightsail, S3), Google Cloud Run, Docker (Compose), WSL2

Soft Skills: Agile, Scrum, CI/CD, Live Service development & debugging, Waterfall, Customer interaction

Architectural Styles: Monolithic, Microservices
